### Featured slider

The featured slider is displayed above your post list, on your home page. To add a post to the featured slider:

1. Go to the Edit Post screen for your post.
2. Check the "Show in featured slider" box in the Watson Theme Post Options meta box.
3. Set a featured image.
4. Save your post.

Posts that are included in the featured slider will not appear in the default blog post listing. Since the posts in the featured slider are included at the top of this listing, they do not appear a second time in that same listing. Featured slider posts will, however, display in archives and RSS feeds.

### Featured thumbnails

The featured thumbnails are displayed after the second post in your post list, on your home page. To add a post to the featured thumbnails:

1. Go to the Edit Post screen for your post.
2. Check "Show in featured thumbnails" in the Watson Theme Post Options settings box.
3. Set a featured image.
4. Save your post.

Posts in the featured thumbnails area will appear in the default blog listing. These posts will be displayed twice if included in the featured thumbnails area.

### Formatting with editor buttons

Watson adds a set of buttons to WordPress's visual editor, which make it easy to use Watson's pre-defined styles in your posts. To view these extra buttons, make sure you've enabled the "Kitchen Sink" option on the visual editor. Stylistic elements include: Horizontal rule, Alert boxes, Footnote and sidenote, Run-in, Excerpt, End.

### Recently Discussed widget

The Watson Theme Recently Discussed widget is featured in the sidebar of the demo site. The widget was designed to be placed in the sidebar, and probably shouldn't be placed in either footer simply because it won't look as nice.

The widget displays the featured image, title, and date of last comment for your three most recently commented posts.

### Slideshows in posts and pages

To add a slideshow on a post or page, add your gallery; then, paste the following shortcode into your page content, replacing the default [gallery] shortcode:

```
[gallery slider="true"]
```

To autostart a slideshow within a post or page, include `autostart="true"` into the shortcode:

```
[gallery autostart="true" slider="true"]
```

### Image dimensions

Featured slider/featured image for pages:

- Width: 608px
- Height: 400px

Single post/default page content area:

- Width: 492px

With-sidebar page content area:

- Width: 550px

Full width page content area:

- Width: 900px
